DNS AUTHENTICATION

Increase deliverability sendin email marketing via ZiftONE.

We strongly advise that all partners planning to use the Email Marketing feature of ZiftONE authenticate the domain for your from email address. This authentication maximizes the likelihood that your emails will successfully arrive at the intended recipient's inchienced.

If you do not take the steps to authenticate your domain, your email marketing will authentially send from a Zift generated address. This address will be composed to the intended numer-domain @zift123.com. This means the ema will not be rejected due to domain authentication, but may be flagged as spam due to an unexpected SPF use a tool to create a new SPF record, or If you already have SPF in place, update your existing SPF record by adding this phrase:

DKIM add a CNAME record, use either: CNAME HOST:

dkim._domainkey.YOURDOMAIN.com
Value: dkim._domainkey.md02.com
OR

CNAME HOST: dkim._domainkey.YOURDOMAIN.com

DMARC add your domain and include the v/p tags, we can suggest at minimum: DNS

Authenticate your DNS with all 3
SPE DKIM and DMARC

SPE

include:md02.com

DKIM

add a CNAME record

DMARC

After SPF & DKIM are in place. Domain name and tag/value pairs should be set
